

Accuracy of 144 eigenvalues computed with error tolerances ranging from $2e-1$ to $1e-4$.
Convergence governed by the smallest 144 eigenvalues. Problem size: 67600, shift: $1e-3$, regularization: 0, overlap: 3

Method: GeneralizedInverse

Arpack's solution with error tolerance of $1e-14$

Method: GeneralizedSymmetricStewart

Error in eigenvalues w.r.t. Arpack's solution
